 - c) cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.

(ACT 85 OF 1993)**

BETWEEN:

AND

(Mandatory)

INTRODUCTION

The Occupational Health and Safety Act, 1993 (Act 85 of 1993) stipulates that the Chief Executive Officer is primarily responsible or liable for the health and safety of all his/her employees. This is embedded in Section 16(1) of the said Act. This responsibility or liability is also extended to include a mandatary that performs work on behalf of the employer on his/her premises.

A "mandatary" is defined in the said Act as: - *"Including an agent, contractor or subcontractor for work, but without derogating from his status in his own right as an employer or user"*

In terms of Section 37(2), read with Section 41, of the said Act, it is legally possible for an employer to indemnify himself from this responsibility or liability regarding the actions of the mandatary. Section 37(2) stipulates that there should be a written agreement in place between the employer and the mandatary regarding the arrangements and procedures between them to ensure compliance by the mandatary with the provisions of the Occupational Health and Safety Act, 1993.

By ensuring that there is a written agreement in place, the Management of _____

is acting in a responsible manner, so as to ensure that this requirement is indeed being met.

In order to ensure that this written agreement is honoured at all times, regular inspections of work that is performed will be conducted and if found not complying with the said agreement, a notice of non-compliance will be issued. All work will be stopped and reasons for non-compliance must be given and what corrective action will be taken to rectify the situation must be stipulated.

PART B – SPECIFICATIONS AND PRICING – SCHEDULE

14. SPECIFICATIONS

A. SCOPE OF WORK

Introduction

Solution for the specialist IT infrastructure for the Electrical/Mechanical services, for the Server Room, at the Overstrand Municipality, corner of Viljoen and Molteno Streets in Onrus River, Hermanus, Western Cape.

The proposal must cater for the upgrade of a Disaster Recovery Data Centre and to equip this room with electrical and mechanical infrastructure.

A fully certified installation in compliance with industry standards and regulatory by-laws for such installations must be provided complete with design, inspections, signoff and acceptance with guarantees.

TECHNICAL SERVICES TO BE DELIVERED

1. Functional Brief

The "functional brief" for this project is described as follows:

- Patch, waterproof and paint the walls, roof and floor of the room with epoxy based paint.
- Supply and Installation of 300mm raised floor.
- Provision to move equipment outside the room and back in after raised floor installation
- Installation of electrical feeder points to below the cabinet space in the computer room
- Electrical supply to access control and fire systems as well as a normal power point for other than IT requirement
- Installation of a keypad access control system to the room
- The design, supply and installation of fire detection systems including, early warning detection and conventional detection.
- Installation of chemical gas fire suppression systems
- The supply and installation of a second air-conditioner with auto switching between the new and existing.
- The installation of a building management system to integrate with all services and SMS capability.

2. Construction of Room

Contractor must propose the cleaning and fixing of the damp problems to the existing wall, ceiling and floor as well as waterproofing where required.

The floor must also be painted with dust sealing finish and the walls and roof with an epoxy based finish of an approved colour.

3. Cabinet Equipment

Contractor must cater for the relocation of the existing cabinet outside the room to be put back in place after construction. Please note that the server must be operational throughout the construction period.

4. Cable tray Systems

Cable tray systems need to be installed from the main DB to cabinet positions under the raised floor. Contractor must also install cable tray systems below the raised floor for data cabling.

All electrical trays must be P8000 metal ducting with covers under the floor and power skirting above the floor.

All data trays must be 200mm cable mesh trays complete with bends brackets and fastening material.

5. Clean Power Systems

New dedicated power circuits must be installed from the main DB to 16Amp Gewiss or similar power sockets under the floor. Two sockets per cabinet must be installed, each feeding off its own circuit and 20 AMP breaker. No Gewiss or plugs will share a circuit. The Gewiss plugs will feed the required UPS systems in the cabinets.

Apart from this dedicated 16Amp red plug sockets will be installed on one circuit feeding access control and fire systems.

One normal plug will be installed to feed any other equipment and the existing light fitting will be replaced with a fluorescent fitting with the required light rating.

6. Air-Conditioning Systems for the Server Room

The supply and commissioning of one additional 12000 BTU Daikin (or similar) split wall air-conditioner unit for the room complete with outdoor condenser.

Piping and electrical cabling between the unit and condenser will be done according to the HVAC specifications.

A changeover switch will be installed between the new and existing air-conditioning units. This will allow switching between the 2 units so that one unit will always rest while the other one works.

The room must be fitted with 2 Daikin units (or similar) with a start and stop controller. The two units will also be a backup for each other because if a unit is faulty the remaining unit will work all the time. However, there is a existing unit fitted in the room and can be utilised.

It is also important to cater for fresh air supply for the room.

7. Fire Detection and Suppression**7.1. Detection**

Tenderers must cater for the installation of a conventional fire detection system. The conventional system must consist of a 3-zone panel with smoke, heat and water (environmental detector) detectors in the room as well as under the raised floor. This system must activate the gas suppression system if it gets a signal from 2 different zones on the panel.

Currently the Overstrand Municipality already make use of Vesda technology as an early warning system in all the existing server rooms. The Vesda system takes samples of the air in the server rooms at millisecond intervals and compares the air with every sample. If there is any change in air, the Vesda will alert but not activate the suppression system. This will allow us to get an early warning and investigate before the conventional detection detects a fire.

It is therefore imperative that the fire detection and suppression system to be installed in this server room, to be similar or fully compliant to the technology currently installed.

7.2. Suppression

Tenderers must cater for the supply and installation of FM 200 chemical gas cylinders (or similar) below and above the raised floor.

FM 200 is a gas system that will eliminate the oxygen in the room to 22% which will eliminate the fire but still leave enough oxygen for human survival.

The FM 200 Gas suppression system will be installed complete with nozzles, piping, fittings, valves, installation manuals and client training.

The system must be installed to comply with the NFPA 2001 and ISO 14520 standards and will be tested on completion and signed off by an engineer complete with documentation and client training.

8. Raised Flooring

In the Bill of Quantities tenderers must cater for the supply and installation of a 300mm raised floor system for the Server room.

The floor will have a metal snap lock under structure with high pressure laminate antistatic floor tile finishing.

The system must have a load capacity of 900kg per square meter and a level 1 fire rating to comply with server room requirements.

Tenderers must cater for a step at the entrance of the room as well as cabinet access holes and cut-outs around the cable tray drops. The step must be covered with industrial rubber tiles and the cut-outs must be edged with aluminium strips.

Edging must be installed around the step and a double cup floor tile lifter must be provided.

9. Access Control to the room

The proposal must cater for the supply and installation of key-pad and lock system with an automatic door closure.

The access control must be battery backed up and will have a break glass emergency exit option.

10. Building Management system

Included must be the proposal to supply and the installation of a Netbotz Data Centre management system (or similar) with an IP camera and SMS ability to monitor the following systems:

- Power supply
- UPS Systems
- Air-conditioning systems
- Fire Systems
- Access Control
- Environmental Control (water)

The unit must be connected to all above systems as well as leak detection and will SMS events to at least 6 different numbers.
